

GWG VALVES AND POLY FITTINGS - ENVIRONMENTAL POLICY

GWG Valves and Poly Fitting is committed to fulfilling its environmental, legal and other requirements, for the protection of the environment, prevention of pollution and other specific commitments relevant to the Company. The Company is also committed to continual improvement of the Company's environmental management system (EMS) to enhance its environmental performance.

GWG Valves and Poly Fitting's EMS enables the setting of environmental objectives for the Company to focus on areas of key importance, to ensure the Company meets business needs and the needs of interested parties and addresses internal and external issues for the Company. All personnel, contractors, suppliers and visitors are responsible for meeting the environmental standards of the Company and legal and other obligations.

In addition to the above, the Company is committed to the following:

- Ensuring the Company's environmental aspects and impacts are understood and managed and enabling a workplace with work methods which are safe and sustainable for the environment
- Implementing any environmental protection regulations, associated National, State and local authority requirements, as well as development applications, consent conditions, and any additional customer contractual requirements associated with environment management
- Setting environmental goals and strategies for areas that could have environmental impact, including lifecycle considerations, and ensuring our work activities do not impact outside our controlled areas and that all equipment tools and machinery are maintained and safe for the environment
- Providing processes for identifying environmental hazards, assessing risks and controlling environmental impacts, including minimising the emission of polluted runoff, dust, and noise from our premises, facilities, and equipment by use of maintenance and protective measures
- Ensuring processes for consultation with workers and interested parties to keep these parties informed and involved in decisions that may affect environmental management
- Providing information, training and supervision to all workers responsible for implementing environmental management and planning for potential environmental emergency situations and managing incidents which could cause adversely impact on the environment

We will never allow operational profit to take precedence over environmental management. If there is a conflict, we are all responsible for choosing environmental management and protection first. I, together with GWG Valves and Poly Fittings, support that choice.

This Environmental Policy is important for environmental management and will be displayed and communicated across GWG Valves and Poly Fittings business operations. The Policy will be regularly reviewed to ensure it remains relevant, appropriate and aligned to the Company's values, commitments and goals.

Darren Werda, Company Director
